

Magnesium Oxide Nanopowder (MgO Nanoparticles Magnesia)

10 gm

Nano-magnesia is a white, odorless, non-toxic powder with a small particle size and a large specific surface area. It has different optical, electrical, magnetic and chemical properties than magnesium oxide, and has high hardness, high purity and high melting point. Nano-magnesia is widely used in electronics, catalysis, ceramics, oils, coatings and other fields.

**9.9% High Purity Magnesium Oxide Nano powder MgO Nanoparticles
Magnesia**

Specification of Magnesia Nano powder:

- 1. stock#: R652**
- 2. particle size: 20-30nm**
- 3. purity: 99.9%**
- 4. appearance: white solid powder**
