

CM25xx series Load Calibration Machine

CM25xx series load calibration machine is combined the load calibration function and loading mechanism. There are main and fine adjusting two grades loading device. It can do the force compensation when accurate loading or load keeping. The load can keep more than 60S in 0.15% accuracy by a skilled operator. The machine is widely used in testing or calibrating all kind of load cell, balance, wheel load weigher or scale. It also can do all kind of big structure part load test.

Specification

Load Capacity: 20000kg (two weigher each Max 10000kg)

Accuracy: 0.15%

Load Test: By Load Cell

Load Display: Digital by unit change kg, N, KN, MN, lbf and tf.

Load Method: By hand pump

Calibrate Position: One or two weigher in one test

Power Supply: AC 110/220V 60/50HZ

Dimension: (L)1450×(W)1000×(H)1750(mm)

Weight: 1250KG
