

Nano Cu₂O

Water Treatment Used Cuprous Oxide Nanoparticle Photocatalytic Material Cu₂O
Nanopowder

Specification of cuprous oxide nanopowder:

Size: 30-50nm, other size can be customized

Purity: 99%

Shape: near-spherical

Color: yellowish brown

Application of Cuprous oxide nanopowder for water treatment:

Cuprous oxide(Cu₂O) nanoparticles have been widely used in wastewater treatment and purification technologies. Compared with other traditional water treatment technologies for their strong oxidizing ability, high catalytic activity, and good stability.

They have the advantages of complete high efficiency, low cost, stability and making use of sunlight, and have good and broad prospects.
